### DESCRIPTION

Tested by me news from BRITEQ, a compact head BT-Meteor. BRITEQ (brand represented by the Belgian company BEGLEC CVA) is slowly becoming one of the leading suppliers of lighting devices in Europe, so it is worth a closer look at their products, in order to assess whether the equipment will meet requirements of companies such as mine.

The prices suggested by the manufacturer are competing for the leading brands in our market for many years and if not they are associated with poorer quality - I'm interested.

Reliability manufacturer can be observed when receiving the package - the hardware is well secured for transport thick and difficult to destroy foam. Also casing feels very durable and is extremely aesthetic. Since the purpose of the device is to work in discos, clubs or events, event organizers, its appearance and small size are therefore a great asset.

Overall rating:

- ⊕ The quality of workmanship and small size
- ⊕ Intuitive device
- ⊕ Quiet and dynamic work

**Where to buy: Briteq**[Show all stores](#)**For the tests, provided:**

After the start of operational testing head on the plus also I noted a clear and intuitive menu. Thanks to operation of the device is easy even for people who have contact with it for the first time. The settings have been divided into three groups: PRO (basic settings to work with DMX controllers), AUTO (basic settings for easy use master / slave) and USER (recording and return to their preferred settings).

The LCD display (a combination of white letters and numbers on a blue background) allows the programming head, even in direct sunlight and bright environments. Addressing party devices for outdoor events is sometimes really difficult. Thus, another point for Meteora.

Electronics, used in the device, it works flawlessly. Attention to the manufacturer to detail can be seen in any combination of sensors, cables, motor. All cables are powiązkowane, which gives them a high mechanical strength and the impression of clarity. Lighting equipment, which I use in the company, alone services and repairs, so the clarity of the construction of the device is very important to me.

The head also surprised me very quiet motor operation. Both function as pan and tilt movements of the device are almost inaudible. Another reason to choose this particular equipment for the implementation of events and conferences, where are indicated "discretion" and silence. This has no impact on the dynamics of the work. Meteor works quickly, without losing the certain and regular movements.

Gobo has 6 very interesting patterns, they can be freely interchanged or dimension ordered them shields metal and glass, including a logo or special requests of customers. 8 offered colors and strobe effects on such a small device are sufficient, but does not meet the needs of the concert. But surely not disappoint the organizers of smaller events, discos, small club shows. Here, check the function of the control device through the built-in microphone.

100W LED technology actually generates a very low power consumption and virtually zero emissions of heat, which affects not only the economy of use, but also on ecology, recently we put high on the agenda.

## Summary

Final assessment:

BT-Meteor is a lightweight, small, solid head, giving the highest quality of lighting and effects at an affordable price. It gives the impression of hardware made of honest, good and durable parts.

Certainly great handle on small concerts, fashion shows, corporate events. We can easily recommend it to owners of discos, DJs, musical groups, sports events in the hotel halls, etc. Do not check on the large open-air concerts and sports halls, but even this did not promise manufacturer. Used as intended, it will be reliable. Go ahead, you can therefore give it 5 stars

## Technical Specifications:

- Power consumption: 160W max
- Power Supply: AC 100 - 240V, 50 / 60Hz
- Operating temperature (Ta) of 0 ° C to 40 ° C
- Ingress protection IP: IP20
- Special Effects: Rotary triple prism
- Gobo wheel: 6 rotating gobo, interchangeable with other discs of metal or glass
- Internal Diameter: 19.50 mm
- External diameter: 22.90 mm
- Color wheel: 8 colors + open
- Beam angle: 12 ° - 16 °
- Light Source 100W LED Engine
- CRI: 82
- The use of DMX channels: 11 + 14 + 5MSL
- DMX connections: 3pin-XLR
- Power connections: Neutrik PowerCon (16A)
- Fuse: 250V 2A (20 mm glass)
- Dimensions: 290 x180 x 435 mm
- Weight: 8.5 kg
